Flora and fauna of Telangana represent a rich tapestry of biodiversity that reflects the state's unique geographical features, climatic conditions, and ecological history. Situated in the heart of the Indian subcontinent, Telangana encompasses a diverse range of ecosystems—from lush forests and expansive grasslands to wetlands and rocky hill ranges. This diversity supports a wide array of plant and animal species, many of which are endemic, endangered, or crucial for maintaining ecological balance. As Telangana progresses economically and urbanizes rapidly, understanding and conserving its flora and fauna is vital for sustainable development and ecological resilience.

Geographical and Climatic Context of Telangana

Telangana is geographically situated on the Deccan Plateau, characterized by its uneven topography comprising upland hill ranges, fertile plains, and river valleys. The region's

climate varies from semi-arid in the western parts to more humid conditions in the eastern and southern areas, influenced largely by the monsoon season. The Godavari and Krishna rivers, along with their tributaries, carve out fertile floodplains that support dense vegetation, while the uplands and hill ranges foster unique ecosystems. The climatic conditions—marked by hot summers, moderate winters, and seasonal monsoons—play a pivotal role in shaping the flora and fauna. The monsoon season, spanning June to September, brings significant rainfall, fostering lush plant growth and supporting the breeding cycles of many animals. Conversely, the dry season witnesses adaptations among flora and fauna to conserve water, leading to the development of drought-resistant plant species and animal survival strategies.

Flora of Telangana

The botanical landscape of Telangana is remarkably diverse, reflecting its varied topography and climate. The flora can be broadly classified into forests, grasslands, wetlands, and cultivated crops, each supporting distinct plant communities.

Forests and Woodland Vegetation

Telangana’s forests are primarily classified as dry deciduous,

moist deciduous, and scrub jungles. These forests cover approximately 19% of the state’s geographical area and are vital for biodiversity conservation. Types of Forests: - Dry Deciduous Forests: Predominant in the upland regions, these forests are characterized by trees like Acacia (wattle), Prosopis juliflora (mesquite), and Anogeissus latifolia. They are adapted to water-scarce conditions and are often interspersed with grasslands. - Moist Deciduous Forests: Found in pockets with relatively higher rainfall, these forests include species like Tectona grandis (teak), Dalbergia sissoo (Indian rosewood), and Chloroxylon swietenia (satinwood). These forests support a richer undergrowth and higher biodiversity. - Scrub Jungles: These are arid and semi-arid zones with thorny shrubs like Ziziphus spp., Paliurus spp., and Euphorbia spp., which are adapted to drought and poor soil conditions. Tropical and Subtropical Species: - Teak (Tectona grandis): A flagship species of Indian forests, teak is cultivated extensively for timber and is found in the moist deciduous forests. - Acacia spp.: Widespread across dry zones, these hardy trees are vital for their nitrogen-fixing ability and economic uses. - Bamboo: Various bamboo species thrive in Telangana, especially in forested hills, supporting both ecological functions and local livelihoods.

Grasslands and Savannas

The open grasslands and savanna-like landscapes are

critical grazing grounds for herbivores and support a range of native grasses, including: - Sorghum spp. - Panicum spp. - Chloris spp. These ecosystems are important for pastoral communities and are also hotspots for birdlife and insects.

Wetlands and Aquatic Vegetation

Telangana’s wetlands, such as the Kolleru Lake and Manjeera River floodplains, host a variety of aquatic plants: - Reeds (Phragmites spp.) - Water hyacinth (Eichhornia crassipes) - Lotus (Nelumbo nucifera) These wetlands serve as breeding grounds for fish, migratory birds, and support aquatic biodiversity.

Cultivated and Medicinal Plants

Agriculture is a predominant activity, and the state cultivates crops like rice, cotton, pulses, and maize, which have their own associated flora. Traditional medicinal plants such as Tulsi (Ocimum sanctum), Neem (Azadirachta indica), and Amla (Phyllanthus emblica) are also widespread and hold cultural and medicinal significance.

Aquatic Mammals: - Otters (Lutra spp.): Found along riverbanks, especially in the Godavari and Krishna, supporting healthy aquatic ecosystems.

Birds

Bird diversity is particularly rich in Telangana, especially in wetlands and forested regions, making it a significant destination for birdwatching and migratory bird observation. Notable Bird Species: - Indian Roller (Coracias benghalensis): Common in open fields and perches on trees and wires. - Painted Stork (Mycteria leucocephala): Frequently spotted in wetlands, feeding on fish. - Pelicans and Herons: Migratory

species that visit during winter, utilizing lakes and rivers. - Vultures: Several vulture species, including the Indian White-backed Vulture, are critically endangered due to habitat loss and poisoning. - Migratory Birds: Telangana's wetlands attract migratory species from Central Asia, Siberia, and Europe, including ducks, geese, and storks.

Reptiles and Amphibians

Reptilian diversity includes: - Indian Cobra (Naja naja) - Russell's Viper (Daboia russelii) - Monitor Lizards (Varanus spp.) - Freshwater Turtles and Crocodiles: Found mainly in rivers and wetlands, supporting aquatic food chains. Amphibians such as frogs and toads thrive in moist environments, especially during monsoon seasons.

Insects and Arthropods

Insects form the base of many food webs, with pollinators like bees and butterflies being vital for agriculture and wild flora. Telangana hosts: - Honeybees (Apis spp.) - Butterflies: species like the Common Mormon and Danaid butterflies. - Beetles, Grasshoppers, and Mosquitoes: abundant in various habitats, influencing ecological dynamics.
