Question 3: Describe the process of georeferencing in GIS.

Answer: Georeferencing involves aligning spatial data (like scanned maps) to a coordinate system so that the data corresponds accurately to real-world locations. This is done by identifying control points with known coordinates and transforming the dataset accordingly.

Question 4: Which GIS data format is commonly used for sharing spatial data over the web?

Answer: GeoJSON is a widely used format for web-based GIS applications due to its lightweight nature and compatibility with web technologies.

Question 5: What is the purpose of a buffer analysis in GIS?

Answer: Buffer analysis creates zones around features (like roads or rivers) at specified distances, useful for proximity analysis, environmental impact assessments, and planning.

Strategies for Effective Preparation Using GIS Exam Questions

To maximize your study efforts, consider the following strategies:
