Engine-Related Warning Lights

These lights alert drivers to issues related to engine performance and emissions: - Check Engine Light (Malfunction Indicator Light) Usually depicted as an engine icon, this light indicates a fault within the engine or emissions system. It can be triggered by anything from a loose gas cap to serious engine problems. - Engine Temperature Warning Light Often shown as a thermometer icon, this warns that the engine is overheating and requires immediate attention. - Oil Pressure Warning Light Typically represented by an oil can icon, this indicates low oil pressure, which can lead to engine damage if not addressed promptly.

Braking and Suspension Warning Lights

Safety-critical systems are monitored by these lights: - Brake Warning Light Usually a circle with an exclamation mark, this indicates issues with the braking system, such as low brake fluid or worn brake pads. - Anti-lock Braking System (ABS) Warning Light An ABS icon signals a problem with the anti-lock braking system, potentially affecting stopping power. - Suspension Warning Light Indicates issues with the vehicle’s suspension system, affecting ride quality and handling.

Electrical and Battery Warning Lights

Electrical system indicators help diagnose battery and alternator problems: - Battery Warning Light Usually a battery icon, this warns of charging system issues, such as a failing alternator or battery. -

Electrical System Warning Light Depicted as a lightning bolt, signaling electrical faults that may impact vehicle operation.

Additional Warning Indicators

Other lights serve to alert the driver to various safety and operational issues: - Tire Pressure Monitoring System (TPMS) Light Alerts when tire pressure is low or uneven. - Airbag Warning Light Indicates potential issues with the vehicle's airbag system, which may impact safety. - Traction Control and Stability System Lights Signal problems with traction or stability control systems, essential for safe handling.
