grasping how SAP SD supports end-to-end sales operations. 2. Explain the organizational structure in SAP SD. Answer: SAP SD's organizational structure defines the hierarchy and relationships between different sales units within a company. The key elements include: - Client: The highest organizational level; represents a self-contained unit with separate master data. - Sales Organization: Responsible for distributing goods/services and negotiating sales conditions. - Distribution Channel: Represents the route through which products reach customers (e.g., wholesale, retail). - Division: Segments products/services into categories for sales and reporting. - Sales Area: Combines sales organization, distribution channel, and division; it's the key element for sales documents. - Sales Office/Sales Group: Optional subdivisions for regional or departmental sales management. - Plant: The location from where goods are shipped. - Storage Location: Specific areas within a plant for inventory storage. The organizational structure in SAP SD is crucial because it influences data flow, pricing, credit checks, and delivery processes. 3. Describe the key master data in SAP SD. Answer: Master data forms the backbone of SAP SD operations. The primary master data types include: - Customer Master: Contains all relevant data about the customer, divided into three views: - General Data: Customer name, address, contact info. - Company Code Data: Financial details like reconciliation account. - Sales Area Data: Sales-specific info such as shipping conditions, payment terms, and sales office. - Material Master: Details about products/services, including sales data, pricing, and delivery-related info. - Pricing Condition Records: Store specific pricing details like discounts, surcharges, and taxes. - Output Master Data: Defines how documents are printed or transmitted electronically (e.g., invoices, delivery notes). Answer: The billing process in SAP SD follows a structured sequence: 1. Order Processing: Customer places an order, which is recorded in the sales order. 2. Delivery: Based on the sales order, a delivery document is created, which involves picking, packing, and shipping. 3. Post Goods Issue (PGI): Once the goods are shipped, PGI is posted, which reduces inventory and updates the delivery status. 4. Billing Document Creation: After

PGI, a billing document is generated in SAP, which records the financial transaction. 5. Invoice Posting: The billing document is posted to Financial Accounting, creating an invoice for the customer. 6. Payment Processing: The customer pays the invoice, completing the cycle. The billing process ensures accurate revenue recognition, proper accounting, and efficient financial reporting. 5. What are the different types of billing documents in SAP SD? Answer: SAP SD supports various billing document types, each suited for specific scenarios: - F2 (Invoice): Standard billing for goods/services delivered. - J1 (Intercompany Invoice): Used in intra-group transactions. - G2 (Credit Memo): For credit adjustments or refunds. - RV (Self-billing): Used in specific billing arrangements. - Pro Forma Invoice: A preliminary invoice provided before actual billing. It is a critical component of order management, impacting customer satisfaction. Types of Availability Checks: - Availability Check with Transfer of Requirements: Checks stock and planned receipts. - ATP (Available to Promise): Verifies stock availability considering future receipts. - Check against Safety Stock: Ensures safety stock levels are maintained.
