Functions of the Musculoskeletal System

The system's primary functions include:

1. Providing structural support and shape to the body.
2. Facilitating movement through muscle contractions and joint actions.
3. Protecting vital organs within the thoracic and pelvic cavities.
4. Participating in hematopoiesis (blood cell formation) within bone marrow.
5. Storing minerals such as calcium and phosphorus.

Biomechanics of Human Movement

Basic Principles of Biomechanics

Biomechanics applies mechanical principles to biological systems, focusing on:

1. Forces acting on the body during movement.
2. Analysis of movement patterns and joint mechanics.
3. Understanding leverage and mechanical advantage in musculoskeletal actions.

Types of Motion

Human movement encompasses several types of motion:
